The RockOn workshop is the next step beyond BalloonSats. During the workshop, teams of 3 build a sounding rocket payload from a kit in three days and launch it into space on the fifth day. Since 2008, 304 people have participated in the RockOn workshops and successfully built and launched 100 payloads to space. The hardware in the kit may be used on future RockSat (and possibly CubeSat) flights. NASA’s Wallops Flight Facility will again be providing the rocket (two stage Terrier-Orion) and launch operations during the 2015 workshop. This hands-on workshop is about learning to build sounding rocket payloads, not rockets. RockOn is supported by the Colorado and Virginia Space Grant programs with significant cost sharing from Wallops and NASA Education. The registration for the 2015 RockOn workshop, is $849 if your register by April 3, 2015 ($899 after), which includes kit hardware (that teams take home), breakfast and lunch each day plus one dinner, t-shirt, handbook, software, and more plus a priceless experience. For more information on the workshop, please visit the website.
