The RockOn workshop is designed to be the next step beyond the Boulder BalloonSat and Ballooning Workshop. During both the RockOn 2008 and 2009 workshops, teams of 3 built a sounding rocket payload (RocketSat) from a kit in three days and launched it into space on the fifth day. The hardware in the kit may be used on future RocketSat and possibly CubeSat flights. NASA’s Wallops Flight Facility will be providing the rocket (two stage Terrier-Orion) and launch operations during the workshop. This hands-on workshop is about learning to build sounding rocket payloads, not rockets. RockOn is supported by the Colorado and Virginia Space Grant programs with significant cost sharing from Wallops and NASA Education. Workshop registration for 2010 will be $1,699 ($1,499 if you register by January 22, 2010) which includes kit hardware (that teams take home), breakfast and lunch each day plus one dinner, t-shirt, handbook, software, and more plus a priceless experience. For more information on the workshop, please visit the website.
